

HOW TO TREAT YOUR WARTS AT HOME USING DUOFILM

1. Apply a generous amount of DUOFILM to the wart/s. Do not get an excessive amount on the normal skin, but make sure the wart/s site is saturated.
2. Allow the DUOFILM to air dry.
3. Put a piece of duct tape or band-aid directly over the dry medication. No gauze is necessary.
4. Leave the medication and tape on for 24 hours.
5. Do this everyday until your next appointment.
6. When you take a bath or shower, remove the tape and try to scrape or pick off any dead skin. If you can remove some of the white skin layers so the medicine can work directly on the wart.
