

## FaceTime Set-Up for Telehealth Visits:

FaceTime visits may be performed from a personal or Forefront Apple device.

1. Create a new iTunes account / Apple ID(s) on-line so patients are unable to see personal phone numbers or email. Click here to set up: <https://appleid.apple.com/account#!&page=create>.
2. Log into Forefront iPad using new Apple ID.
3. If using a personal device, log out of FaceTime in your Settings and enter the new ID.
4. You can also change how your caller ID displays for the patient to your email in FaceTime settings so your personal phone number is not displayed.
